

Hydraguard - *Protect Your People*

Unpredictable ruptures (mostly pin hole) in hydraulic hoses can project high-pressure oil through workers' PPE and into their body in an instant, causing serious injury or death.

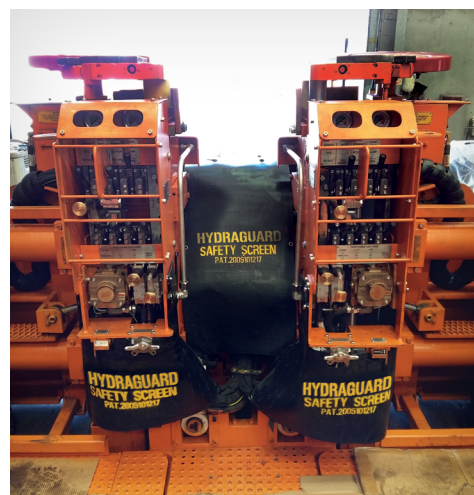

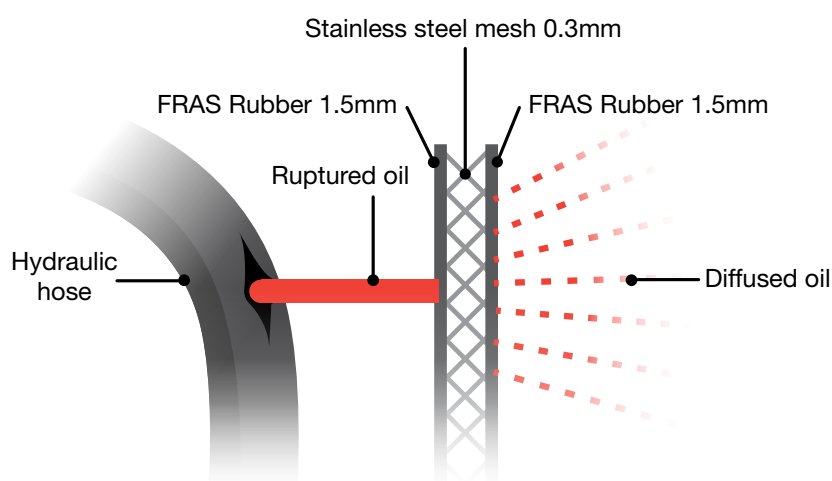

Brain Hydraguard is a fit-for-purpose rubber-encased stainless-steel guarding system that diffuses the oil, mitigating an injection of high-pressure oil into the human body.

Hydraguard combines light-weight woven stainless-steel mesh at .31mm aperture and FRAS rubber approved for underground mining.

- » Fits around unusual-shaped hydraulic apparatus
- » Easily removed for maintenance
- » Trial pieces tailored and tested in situ
- » Fitted on new equipment or retrofitted to gear currently operating
- » Flexible attachment ... mount to frames; stainless steel eyelets for bolts, straps, hooks or cable ties

Deploy anywhere people and hydraulics come close – longwall, underground and open cut mines, machinery and heavy vehicles.

HOW HYDRAGUARD WORKS

- ✓ Rubber curtails velocity of oil
- ✓ Mesh diffuses oil
- ✓ Second layer of rubber slows oil further
